

## A Presentation on Wood Frogs

5B Yau Nga Yin, Katie

Good morning. Today I am going to do a short presentation on wood frogs.

Wood frogs are wonderful animals. I fell in love with wood frogs after I watched a programme about them on the National Geographic Channel. I then read a book about them. They live in the north of the Arctic Circle. They usually live in woodlands.

Wood frogs are small-sized animals. They are 3.8 to 8.2 centimetres in length and they weigh 7.7 grams. They have many colours, such as brown, red, green and grey.

Wood frogs can survive in winter. In winter, they stop breathing and their hearts stop beating. However, they do not die. When spring arrives, the ice melts and their heartbeats and breathing return. The frogs are as good as new.

Wood frogs can find their families when many frogs are in the same place. They can see each other and come together.

I think wood frogs are the most wonderful of all animals. Do you agree? I hope you found my presentation about wood frogs interesting. Thank you for listening.

## A Genie from the Wardrobe

5C Ng Ching Yee, Latisha

One day, Eric and Alan wanted to go hiking in a forest, but they lost their way. Then, Eric and Alan found a castle and went into it. They saw a wardrobe in a room. When Eric opened the wardrobe to find out what was inside, Alan saw a genie flying out. Alan shivered and shook. He shouted, 'Look! A genie!'

They were very scared. However, the genie said, 'I will not hurt you. How about having a party?' 'Yeah!' shouted Eric. They ate some food and played for a while. Finally, the genie gave them a gift. It was a genie doll. The boys had an unforgettable day.
