

## Self-introduction

6C Kwok Kin Lun, Colin

My name is Colin Kwok. I am studying at St. Andrew's Catholic Primary School. I live in Sheng Yeung Village in Clear Water Bay. I am eleven years old now. I live with my dad and mum. I have a great family. I always do housework and cook for my parents.

I am lucky that I can study at this great school. The teachers are nice and the classmates are kind. I have four best friends in the class. They are Jack, Jayden Shek, Derek, and Steven. They care for me and always play with me. My favourite subject is P.E. because I like doing exercise. It keeps me healthy. Mr. Ho recommended me to be an Activity Helper. My job is to teach P.1 students to do difficult activities. This job helps me learn a lot of things: like, how to take care of young students.

My favourite hobby is karate. Every Saturday, I go to Tiu Keng Leng Sports Centre to practise. I won the second place in a competition too. I am good at sports and English, but weak in Maths. Because of that, my dad asks me to do more Maths exercises and revise it again and again. Now, my Maths is much better.

This is the end of my self-introduction. Thank you.

## Save Us, the Endangered

6C Ng Lok Wai, Neron

Hello, I am Polar Bear. I am very fat and huge, and I have thick paws. I live in the Arctic. I usually eat seals, but sometimes I feed on other Arctic marine mammals like walruses.

People always think my skin is white, but it is actually black. I look white only because of my fur. I can smell my prey up to a kilometre away.

There are only 22,000 to 31,000 of us left in the world. Therefore, I am an endangered animal. I am endangered because of the loss of my habitat, global warming and hunting. There are very few places left for us to live in. Humans keep emitting gas from factories. This results in the melting of the ice in the Arctic. Humans also keep hunting us, so our numbers are decreasing.

I want humans to stop hunting us and stop throwing rubbish into the sea. Please share your knowledge about conservation with others. Please! Help protect us! We are almost extinct now. Please help us!
