

A Presentation About an Amazing Animal

5A Chan Man Chun, Mike

Good morning. Today I am going to do a short presentation on hedgehogs. I choose hedgehogs because their shape is interesting.

The hedgehog is a mini-sized animal by nature. Some are one foot tall, while others are as small as four inches, and they weigh about five to six ounces.

Hedgehogs can protect themselves very well because they have above 7000 spines on their back. If other animals attack them, their spines will spike them.

Hedgehogs are also very good at getting away from their enemies. They roll into a ball and hide from their enemies.

I hope you have enjoyed my presentation on hedgehogs. Thank you for listening!

An Amazing Trip

5A Cheung Yui Tung, Jamie

In the holiday, my dad, mum, and I went to Dublin. Dublin is both the capital and the largest city in Ireland. We went on a bus tour called 'Finn McCool's Tour' which took us to different places.

The first place we visited was Dark Hedges. It is a very special place. The tour guide told us that many horror movies were filmed there. I felt scared. Then, we visited Giant Causeway. The rocks there are hexagonal shaped because the volcanic lava cooled very quickly. They were magnificent.

After the tour, we had dinner at Burger King. The fast food was delicious. Although we were tired, we were delighted that we went on this tour and visited those special places in Ireland.
